Photoshop Font Test Script (FontTest.jsx) Read Me

This script is intended to be used if Photoshop users are experiencing application instabilities due to bad fonts. This tool will help to identify bad fonts so that they can be removed from the system.

Please note that this script makes changes in Preference in order to report the accurate test result. These change(s) will be reverted back to the original state at the end of testing unless the users cancel the script while running. (Please note the Font Preview Size will not be reverted.)

The changes to be made in Preference:

- Preference -> Type -> Turn "Enable Missing Glyph Protection" option OFF
- Preference -> Type -> Turn "Font Preview Size:" option OFF
- Preference -> Units & Rulers -> Units-> Turn Rulers unit to **pixels**
- Preference -> Units & Rulers -> Units-> Turn Type unit to points

To run Font Test Script, please follow the steps below:

- Download and place FontTest.jsx file into the following directories: Win: C:\Program Files\Adobe\Adobe Photoshop CS5\Presets\Scripts\...
 Mac: Applications\Adobe Photoshop CS5\Presets\Scripts\...
- 2. Launch Photoshop.
- 3. Go to Help->Font Test... to run Font Test Script.

If the script needs to change the Preferences, the dialog below will show up. Click "OK".

4. The Font Test dialog below will show up.

This dialog indicates you have 259 fonts installed on your system. The font item numbers indicate that it will start testing from the 1st font to 259th font. Please edit the numbers accordingly. It's recommended to clear the font cache before running Font Test script, so keep the "Clear Font Cache" check box **ON**.

- 5. Click "Start" button to start testing.
 - This script creates a text layer and then type strings for each font.
 - This script creates and closes a new document every time 100 fonts are tested.
 - Hit "Esc" key if you would like to interrupt the testing. Next time you launch Font Test, the script will start testing from the font that you interrupt previously.

Font Test		
The number of fonts installed:	259	
The number of fonts tested: The font item numbers to test: 15	~ 259	
The number of fonts to be tested:	245	
Clear Font Cache		
Start Cancel Start Over		

- i. Click "Start" button to continue testing.
- ii. Click "Start Over" button to start testing from the 1st font.

• If Photoshop crash during the test, please re-run Font Test and continue until it completes testing.

- If the error(s) seem to be the font related issue, please follow the steps below:
 - i. Attach the log file, **and the problematic font**, to an email and send it to DL-PS-External-Bugs-Tools@adobe.com.
 - ii. Uninstalling the font from your system is recommended if the font is causing the Photoshop crash.
